4.1.1 Responses to Question One and Two from the Australian Interviews

Question one: What do you consider to be the main benefits and disadvantages of CGT preferences?

Question two: Given the benefits of deferral that apply to capital gains and the ability of the taxpayer to effectively choose when and if they will realise a capital gain, are preferential rates for capital gains considered appropriate?

other piece is to the extent that some gains come from corporate profits and some of those corporate profits have previously been taxed at the enterprise level, that would produce a second level of tax which might lead to over-taxation of corporate enterprises relative to other businesses.

4.1.3 Responses to Question One and Two from the Canadian Interviews

> *…preferential [CGT is]…intended to deal with the integration of taxation…at a corporate level together with the taxation of the shareholders…it doesn't seem appropriate that the full amount of the gain should be taxed when the shareholder disposes of the shares because the same income has effectively been taxed twice…. I think the primary disadvantage…is there's an incentive for taxpayers to…characterise one type of income as a capital gain rather than as the income it should be characterised [as].*

5HVSRQGHQW + UHIHUUHGFKDUDFWHUQLVWLFVRIWKHQLQHWHHQWKFHQWXU\WD[V\VWHPVWR

4.1.4 Responses to Question Three

Question three: Is the case for retaining capital gains preferences due mostly to economic efficiency considerations, political considerations or a combination of both?

I don't think you can separate the two…

5HVSRQGHQW '

Political considerations…but when I say political considerations, I don't mean that there's a sentiment in the country. I just mean the political clout of wealthy taxpayers.

5HVSRQGHQW .

I think it's a combination…a lot of politicians have been searching…for the magic bullet…something we can do to cut taxes and not (lose) a lot of money…so they readily listen to these arguments that you can't really raise revenues with capital gains or you don't lose much when you cut them because of these realisation responses.

[CGT rates], make an exclusion and get rid of it entirely for owner occupied housing…. The foremost policy [factor] that I think should drive tax policy of any kind right now, at least in this country, is dealing with the deficit and I think raising taxes needs to be a part of that because it's just too hard to do it on the spending side.

…just tax it as ordinary income and… [get] rid of a lot of other tax preferences and…[go] back to the kind of reform we had in 1986. You can have lower tax rates on all income….With capital gains, you have to fill out this whole schedule and…if you got rid of a lot of tax preferences you might get rid of a whole bunch of schedules.

5HVSRQGHQW %

I don't think it's just the capital gains tax but [in] our general system, I would prefer to see lower corporate individual rates and higher tax rates on capital gains and dividends, that is, higher tax rates on corporate income at the shareholder level and you know, preferably I'd like to see some form of accrual taxation either through taxation of gains at death or the… accrual taxation of tradable shares, I'm not sure which is the best way to go about that but I think that's going to be very hard to get in a political sense… So moving toward more accrual taxation, equalising rates on gains and ordinary income and bringing in the corporate rate I think are the kind of three legged stool of better taxation of capital income.

5HVSRQGHQW &

[If] they wanted to reduce the rate, they could reduce the rate without losing any revenue…if we went back to that it wouldn't be the end of the world.

4.2.3 Responses to Question Four from the Canadian Interviews

On liquid investments, I'm quite happy with accrual taxation at full rates. Actually on all of it, I'd tax at full rates...I would never get elected

5HVSRQGHQW +

I think we ought to be eliminating the general preference for capital gains and… at the same time, eliminating the poor treatment of capital losses in the sense that only half of them are subject to tax and to the extent that we want to justify particular types of investment, we should have targeted rules but they do have to be appropriately targeted…

5HVSRQGHQW /

5HVSRQGHQW /¶V UHVSRQVH LV FRQVLVWHQW ZLWK D

LQHODVWLF VXSSO\

I'd like full inclusions but…it seems that going back to the 75 per cent inclusion rate is politically feasible. We have… $500,000 capital gains exemption for small businesses… and farms…. I'd certainly get rid of that.

5HVSRQGHQW .

I think the capital gains tax system in Canada works fairly well….I think the deferrals we have now are more than sufficient and are appropriate. I don't see the need myself for more exemptions or preferences.
