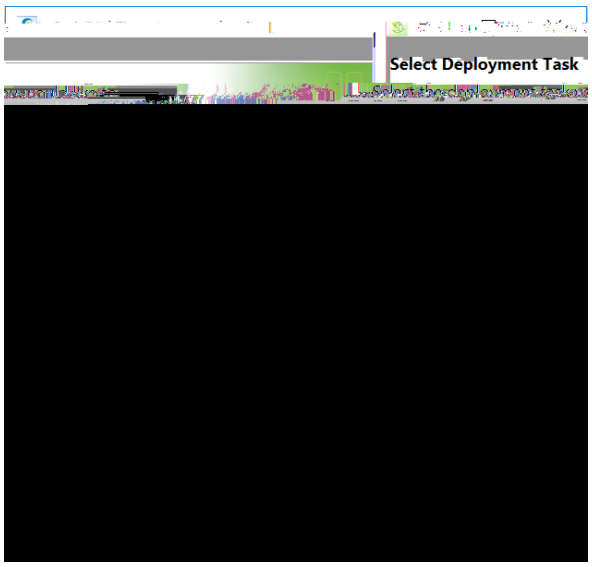
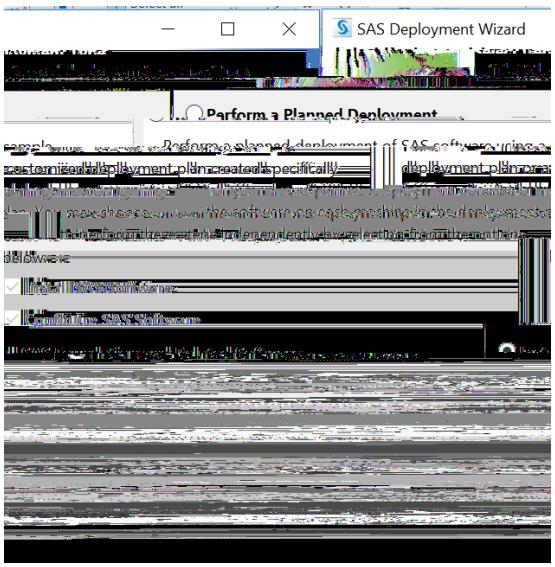
SAS 9.4 Windows Install Instructio

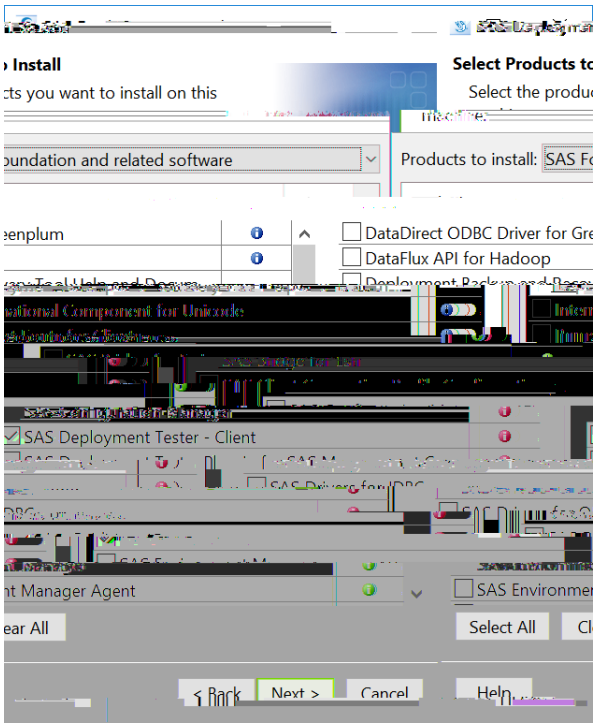
SAS Installation Instructions (Windows)

1. Browse to your SAS depot folder and right click on the **setup.exe** file and select “Run as administrator”
2. Select your preferred language for the SAS Deployment Wizard
3. Select **Install SAS Software** > click **Next** Select **Install SAS Foundation and Related Software**

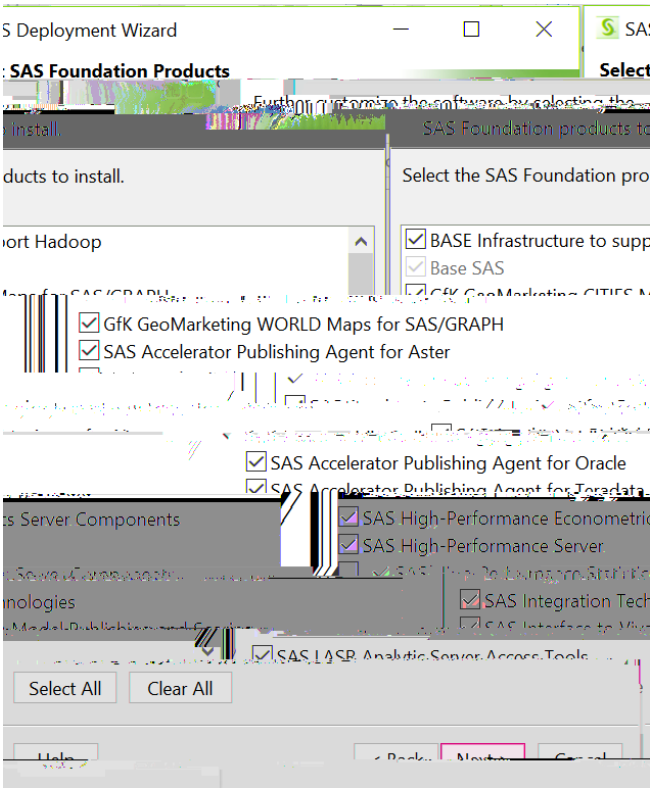




4. Select the Products you wish to install (ideally, click on Clear All and then select **SAS Enterprise Guide** and **SAS Foundation**) > Click **Next**



5. Select the SAS Foundation Products – default products should already be selected > Click **Next**

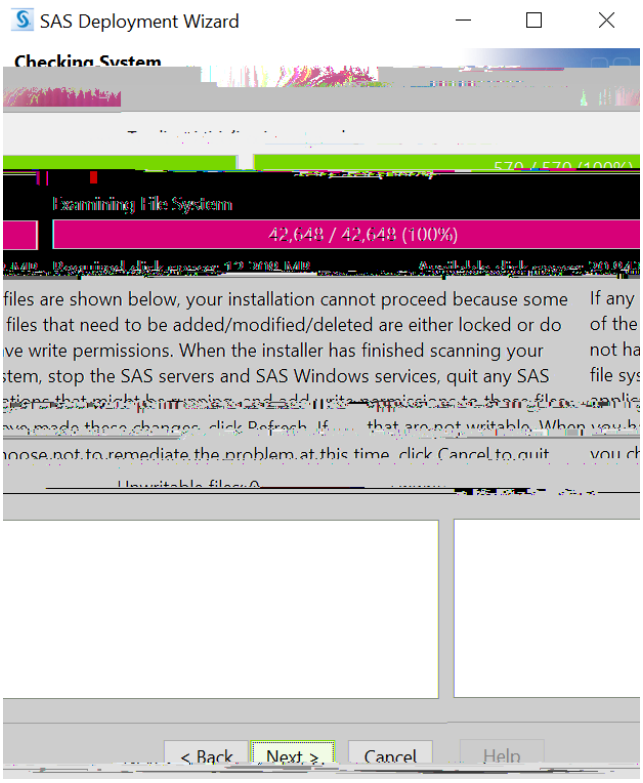


6. Specify SAS Installation Data File – by default, sid_files of your SAS Software Depot folder is selected (if necessary, click **Browse** to navigate to this file)

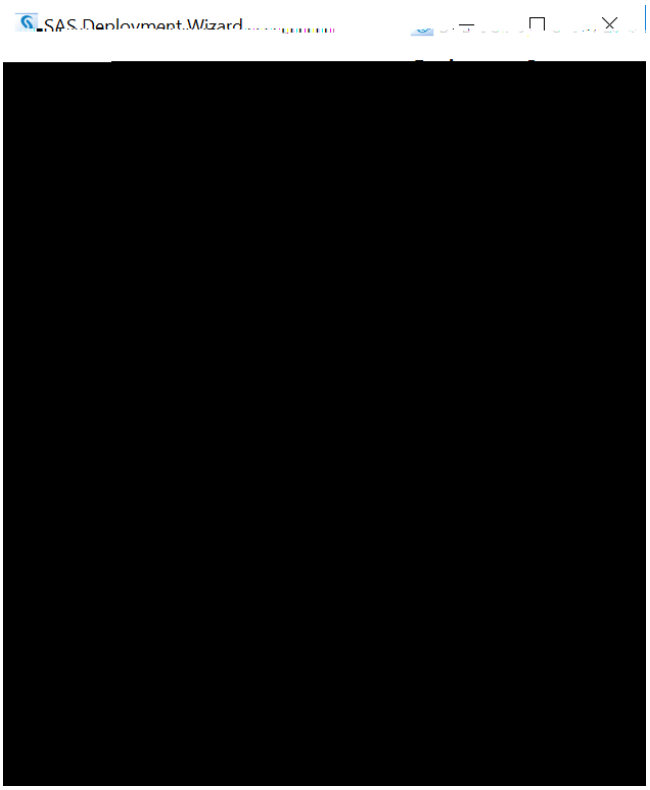
7. Select Language Support (Note: Clicking on **Clear All** will only leave English ticked)

8. Select Regional Settings – Select the Locale (English (Australia) [en_AU] and click

9.

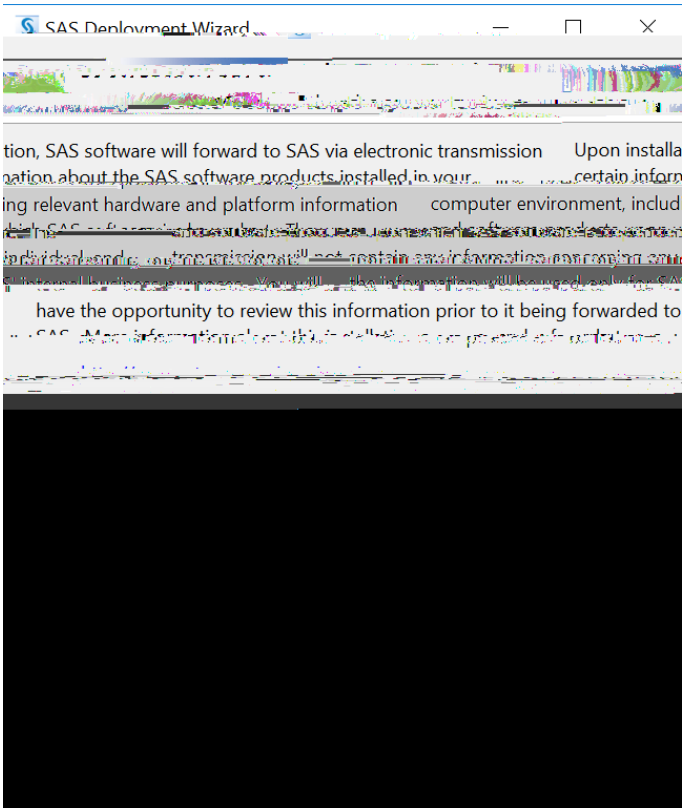


11. Deployment Summary – Click on start to begin the installation



12. Deployment Complete – Check all stages for errors or warmings and click **Next**

13. Select support Option – Select to send an electronic record to SAS if you wish > Click **Next**.



14. Additional Resources for future reference > Click **Finish**.
