2.2 Course aims

Students will gain an understanding of how the structure of a material can be manipulated through variations in processing conditions and how manipulation of structure leads to variations in materials properties.

2.3 Course learning outcomes (CLO)

4. Course schedule and structure

This course consists of 54 hours of class contact hours. You are expected to take an additional 98 hours of non-class contact hours to complete assessments, readings and exam preparation spread over the term.

Week	Topics	Activity
------	--------	----------

5. Assessment

5.1 Assessment tasks

Assessment task	Description	Weight	Due date
Assignments:	Students are required to submit an online portfolio about several activities in weeks 1-5 on mechanical materials design and 2 home-works	20%	Week 5
Report and Presentation:	Students will be required to conduct research on a topic involving materials, properties, design parameters, performance, and/or failure. Requirements -A formal document, written to professional standard -A formal presentation	20%	Week 10

- Unless otherwise specified in the task criteria, all assignments must be uploaded via Moodle prior to the due date for submission.
- Assignments/lab reports submitted after the due date for submission will receive a 10% of
